Skills

Languages Java 8, 11, 17, 21, SQL, HTML, Next.JS
Frameworks Spring Framework (Spring Boot, Spring MVC, Spring Cloud, Spring IOC/AOP/JDBC), Hibernate, JPA, Resilience4J, Vert.x
Microservices Eureka, Feign Client, Spring Cloud Gateway, Circuit Breaker
Infrastructure Linux, Jenkins CI/CD, Docker, Splunk
Integrations RESTful APIs, Kafka, Zipkin, GenAI Integration
Databases PostgreSQL, MySQL, MongoDB, Redis (caching)
Cloud AWS(IAM, S3, SQS, Secret manager)
Build & VCS Maven, Gradle, Git, GitLab, Jenkins CI/CD, SonarQube
Methodology Agile, Scrum, Architecture Planning, Troubleshooting, Technical Mentorship

Experience

Tata Consultancy Services – Ghana Revenue Authority

Mar 2025 – May 2026

Java Developer (Fullstack)

- Owned end-to-end delivery of tax form and accounting microservices using **Java 11** and **Spring Boot** for a government-grade platform – covering application development, **REST API** design (**OpenAPI/Swagger**), and integration through **Feign Client** and **Kong API Gateway**, reducing cross-service integration time by **30%**.
- Refactored legacy procedural accounting logic into clean **OOP**; redesigned **Hibernate/JPA** entities against **PostgreSQL** and introduced **Redis** as a distributed caching layer, cutting response times by **25%** and reducing database load by **20%**.
- Built and operated **Kafka**-based asynchronous processing for high-volume tax data workflows, improving throughput by **35%** and decoupling downstream services across the platform.
- Partnered with business analysts and QA on client-facing requirement discussions and backlog grooming/estimation in **Jira**, improving sprint delivery predictability by **15%**.
- Mentored **4+** junior/trainee developers on coding standards, Git workflow, and production debugging of Linux-hosted services; used **Claude** and **Cursor** to accelerate service scaffolding and testing, improving code coverage by **20%**.

Tata Consultancy Services Global

Jan 2022 – Mar 2025

Java Backend Developer

- Broke monolithic core methods into lightweight **REST APIs**, containerized them with **Docker** for Linux runtime environments, provisioned repeatable infrastructure with **Terraform**, configured hosts with **Ansible**, and shipped builds through **Jenkins CI/CD (Maven, Git)**, improving release cadence by **40%**.
- Developed and enhanced backend microservices using **Java 11/17** and **Spring Boot**, integrating **RESTful APIs** and third-party services, improving feature delivery speed by **20%**.
- Supported a guided migration of batch data workflows from legacy **DB2** to **PostgreSQL**, adjusting **Spring Batch** jobs and validating data integrity, achieving **100%** accuracy during infrastructure cutover.
- Independently troubleshooted and resolved production incidents within SLA using **ELK Stack** for root-cause analysis, cutting mean resolution time by **25%** and downtime by **15%**.
- Deployed **Azure Information Protection (AIP)** in a cloud environment, securing **100%** of sensitive internal organisational reports.
- Built a dynamic file upload/download module using **Java Multipart** and applied **Spring MVC** patterns with global exception handling throughout, reducing document handling turnaround time by **30%**.

Projects

Codebase RAG Chat

- Built a Next.js + Spring Boot app where users sign in with GitHub, index their repos, and chat with the code. Answers stream in real time with citations to the source files.
- Indexed repos into Postgres (pgvector) using chunking and embeddings, then retrieved relevant code with similarity search before generating the reply. GitHub OAuth, async indexing, and SSE streaming power the flow.

Education

Government Engineering College, Dahod

Dec 2021

Bachelor of Engineering – CGPA: 7.85 / 10

Government Polytechnic, Navsari

Dec 2018

Diploma in Engineering – CGPA: 8.99 / 10
